Mechanical

- Polarized fiber (single-mode only)
- Output isolator
- Narrow emission bandwidth
- Separated collimator
- Interlock
- Various fiber connectors (FC, SMA...)
The PDM series consists of OEM laser modules which generate optical pulses from input TTL/LVTTL digital signal. From single-shot to continuous wave (CW), with pulse length from 2ns to any required pulse-burst configuration, the PDM series offers the best temporal flexibility on the laser market.

Key features:
- Single-shot, burst mode or CW operation
- Up to 10.5W peak power
- Min. pulse duration: 2 nsec (FWHM)
- Extremely low jitter (<8ps)
- Large range of wavelengths from UV to IR
- Up to 250 MHz repetition rate
- Excellent beam quality
- Generate short pulses from a longer TTL signal
- Smart control (USB interface)

Key applications:
- MOPA architecture
- Low power micromachining
- Laser development
- Non destructive control
- Telemetry
- Doppler measurements
- Metrology
- Semiconductor testing

Generate optical pulses on demand from input TTL/LVTTL digital signal with extremely low jitter.
